

WING Battery delivers safe Lithium Ferro Phosphate battery solutions for Telecom application.

The LiFe 100-48 back-up lithium ferro phosphate battery system is developed for backup of Telecom equipment. Under normal condition, grid AC power supply to rectifier module and the Telecom loads and charge battery pack, when the AC power fail, rectifier module stop power supply, the battery serves for Telecom equipment, to ensure the Telecom equipment runs normally. When the AC power is switched on again, power rectifier module for Telecom equipment recover to while charge the battery pack.

Innovative Features

- RS485 communication output for monitoring
- Built-in BMS with Charging current limitation
- Built-in automatic protection for over-charge, over-discharge and over-temperature conditions
- State of charge and state of health indication
- Built-in battery control for efficient operation
- Internal cell balancing
- Compatible with standard Telecom rectifiers
- Maintenance free
- More energy per volume
- Weight: easy installation, one person

Specifications

| opecifications | |
|---------------------------------------|------------------------|
| Voltage | 48V |
| Nominal capacity (25°C, 0.2C) | 100Ah |
| Normal energy (25°C, 0.2C) | 4800 Wh |
| Standard discharge 25°C | |
| Max. constant current | 100A |
| Cut-off voltage | 42V |
| Standard charge 25°C | |
| Charge voltage | 52V~54V |
| Float voltage | 51.75V~52.5V |
| Maximum constant current | 100A |
| Recommended charging current and life | 50A (0.5C) for 2 hours |
| Cycle life (0.2C, 25°C) | 80% DOD, 6000 cycles |
| Recommended operating temperature | |
| Charging | 0°C~5°C |
| Discharging | -20°C~50°C |
| Storage temperature | -40°C~55°C |
| Round trip efficiency (%) | > 98% |
| Calendar life | ≥ 12 years |

LiFe 100-48 Lithium Gerro Phosphate 48V - 100Ah

BMS Parameters.

| NO. | Туре | | Function | Setting value | Remarks | |
|------|-----------------|----------------------|---|---|---|-----------------|
| 140. | | | | LiFe 100-48 | | |
| 1 | Voltage | Charge | Cell Voltage Protection | 3.80V Protection | Recover at 3.6V | |
| 2 | | | Total Voltage Protection | 56.0V Warning/ 57.0V Protection | Recover at 54.0V | |
| 3 | | Voltage | | Cell Voltage Protection | 2.5V Protection | Recover at 3.1V |
| 4 | | Discharge | Total Voltage Protection | 43.2V Warning / 42V Protection | Recover at 46.5V | |
| 5 | Current | charge | Normal | ≤100A | | |
| 6 | | | Normal | ≤100A | | |
| 7 | | Current Discharge | Over Current Protection 1 | >100A and <120A | Delay 30s ,recovery in every 1min | |
| | | | Over Current Protection 2 | >120A and $<$ 200A | Delay 3s ,recovery in every 1min | |
| 8 | | | Short Circuit Protection | ≥200A | Delay 1mS | |
| 9 | Temp | Cell Temp 1 | Low temp protection | Charging $<$ 0 $^\circ { m C}$ Discharging $<$ - 20 $^\circ { m C}$ | Delay 1~2S | |
| 10 | | Cell Temp 2 | High temp protection | Charging ≥70℃ Discharging ≥75℃ | Delay 1~2S | |
| 11 | | PCB | Range | ≥95℃ | Recovery at 75 $^\circ\mathrm{C}$ | |
| 12 | Cell Balance | Balance | Make all cells be balance during charging process. Current: 150mA | $V_{Max}.{\geqslant}3.40V$ and $V_{Max.}$ - $V_{Min}{\geqslant}40mV,$ Start balance | All cell voltages \leqslant 3.65V and V_{Max.} - V_{Min} \leqslant 40mV, Stop balance | |

Battery Status

- Stop/Transport Mode. In working mode, turn off the air switch, battery will go to Stop MODE with low self-discharge. In STOP mode, charging MOS and discharging MOS are open, battery can't charge, discharge or communicate.
- 2) Working Mode. In STOP mode, connect the battery to SMPS, turn on the air switch, battery will go to working mode. In working mode, BMS will monitor battery voltage, current and tem and communication is available, charging MOS and discharging MOS are close. Battery will operate as the settings.
- 3) Sleep Mode. After turning on the battery, if the battery voltage is below low voltage protection, BMS will go to sleep mode in 1 minute. In sleep mode, charging MOS and discharging MOS are closed, BMS will check the current every 1 minute, if there's charging current connecting, battery will turn to working mode.
- 4) Error Mode. In working mode, if there is: ① Battery cells, Δ U>2.5V, or ② any cell voltage >4.4V or <0.5V, or ③ battery temp is <30°C or +100°C, BMS will go to error mode, ALM will bright and other LED will shut down, and to STOP mode, charging MOS and discharging MOS are open. Need to troubleshoot.
